

EMPIRE STATE RIDE
TO END CANCER

GPX & GPS Support

The Empire State Ride offers GPS data for the route. The data is designed to be used with any GPS device, smartphone, or tablet.

Additional GPX and RideWithGPS files are provided during the event as a supplement to our paper cue sheets. It should be noted that the accuracy, completeness, reliability, usability, or suitability of these files cannot be guaranteed for accuracy. The data is for general use only and the coordinates should not replace the content provided by actual cue sheets and common sense. The paper cue sheets provided at the orientation meeting, along with changes provided by the event director during the map meeting, are the definitive sources of navigation. The Empire State Ride or BIKETernity assumes no responsibility for incorrect results or damages resulting from the use of these files.

To gain access to the GPX files, and use them for supplemental navigation on a mobile device such as a smartphone, tablet or garmin device simply click the link below to RSVP to the invitation. You will receive an email from RWGPS with instructions on how to utilize the routes.

[Invitation to The Empire State Ride 2017](#)

Reminder: You will also be receiving a paper cue sheets at registration, and the route will be marked.

Here are instructions on how to load the route to your Garmin.

From Ride with GPS

Open the route you want to load.

Click on Export

Then click on TCX Course

The file will come up. Simply save it in the new files section of your garmin. Or save it somewhere on your computer then drag and drop it into new files on the garmin.

Here are the same instructions with much more detail.
